EXECUTIVE MEMORANDUM

TO: JBG Management Team
FROM: Business Strategy Associate
DATE: August 12, 2026
SUBJECT: JBG Portfolio Growth Engine (GPE) — Capital Allocation & Synergetic Growth Strategy

Context & Strategic Challenge

Jithvar Business Group (JBG) operates a highly diversified portfolio across Technology Consulting (JCS), Renewable Energy (Nature Grid), Recruitment & Workforce Solutions (Aequalis Global), and SaaS/New Ventures. While each business shows strong individual potential, JBG faces classic constraints: **limited capital, management attention, and execution bandwidth**. The fundamental strategic challenge is not merely listing new business ideas, but building a **systematic, repeatable engine** to decide *where to grow*, *which opportunities to pursue*, and *what to execute first*.

Core Recommendation: The JBG Portfolio Growth Engine (GPE)

Rather than operating these business units as independent silos, JBG must transition to a **unified, capability-driven platform**. We propose the **JBG Portfolio Growth Engine (GPE)**, a structured methodology that optimizes core operations, drives cross-business synergies, and objectively evaluates opportunities using a quantitative prioritization scorecard.

```
+-------------------------------------------------------------------+ | JBG PORTFOLIO ENGINE | +----------------------------------+------------------------------+ | Core Growth (Job 1) | Synergy Adjacencies (Job 2) | | JCS: Int'l Managed Services | Tech + Recruitment: HR Tech/ | | Nature Grid: Solar C&I + O&M | Staffing | | Aequalis: Specialized Staffing | Tech + Solar: Energy Asset IoT | +----------------------------------+----------------------------------+ | Opportunity Prioritization Scorecard | | Attractiveness (20%) | Strategic Fit (15%) | Feasibility (10%) etc. | +-------------------------------------------------------------------+
```

1. **Job 1: Grow What Exists (Core Optimization)**

2. **JCS**: Pivot from low-margin custom software development to international IT managed services, CRM/ERP integrations, and cloud migrations. This secures high-margin retainers.
3. **Nature Grid**: Shift focus from capital-intensive residential installations to Commercial & Industrial (C&I) solar and high-margin, long-term Operation & Maintenance (O&M) contracts.
4. **Aequalis Global**: Expand from transactional executive search into high-frequency contract staffing and specialized IT recruitment, creating a predictable, recurring cash flow engine.

5. **Job 2: Find What's Next (Cross-Business Synergies)**

6. **Recruitment SaaS (HR Tech)**: Combine Aequalis Global's domain expertise and client networks with JCS's software engineering to build a vertical recruitment automation platform.
7. **Energy Management Analytics**: Combine Nature Grid's solar site installations with JCS's technical capabilities to build an IoT-driven solar asset monitoring and predictive maintenance SaaS.
8. **Consulting Productization**: Package repeatable consulting methodologies from JCS into software-as-a-service (SaaS) templates for mid-market clients, transitioning from project-based billing to scalable subscription revenue.

The Opportunity Prioritization Scorecard

To eliminate emotional capital allocation, JBG must screen all growth initiatives through a standardized, multi-factor scorecard: * **Market Attractiveness (20%)** & **Revenue Potential (20%)** (Total 40% value pool size) * **Strategic Fit (15%)** & **JBG Capability Fit (15%)** (Total 30% leverage of existing assets) * **Competitive Intensity (10%)** & **Ease/Speed of Execution (10%)** (Total 20% entry barriers and speed-to-market) * **Capital Required (5%)** & **Execution/Operational Risk (5%)** (Total 10% risk/downside mitigation)

90-Day Execution Roadmap

- **Days 1–30 (Diagnose)**: Review baseline financial and capability metrics for existing business lines. Establish the JBG Business Health Dashboard.
- **Days 31–60 (Discover)**: Populate the growth opportunity pipeline. Assess and score opportunities using the Prioritization Scorecard, narrowing the longlist from $20+$ to 3 priority pilots.
- **Days 61–90 (Validate)**: Conduct customer discovery, test pricing assumptions, and launch minimum viable pilots (MVPs) for the top-ranked opportunities.

Key Metrics of Success

JBG should measure success across a hierarchy of KPIs: Portfolio-level ROIC and revenue growth, Initiative-level customer acquisition cost (CAC) and payback period, and Innovation-level metrics—most notably the **% of projects killed early**—to ensure capital discipline.
